

SOURCE TWO

Open Source FPV Racing Frame Version 0.1

GETTING INTO FPV

The “miniquad” or “racing quad” community is an international community made up of people just like you who for whatever reason wanted to fly a quadcopter or “drone” so they set out to learn how to do that. And with their help you will be able to do the same.

THE FRAME

The SOURCE TWO is a collaborative open source frame project initiated by Team BlackSheep, targeted at FPU racers. It follows the footsteps of SOURCE ONE, a FPU freestyle frame.

The frame design is donated to the community to empower creators and makers, and integrate best practices and current trends faster into a continuously manufactured product. It's a cheaper alternative to clones that can be bought with the peace of mind that the big brands of the FPU industry stand for.
